

### BRIDGE SAW **FOR ABRASIVE MATERIAL:**

The bridge saw is a tool used for shaping and trimming of the semifinished products made of marble and granite and cut's quality is the most important feature.

The range of bridge saw meets the needs of those who prefer the cutting speed and life.

The segments are of the double-layer radius, for bigger diameters are also available multi-layered segment configuration

**MATERIAL:** Abrasive material

Diameter mm	Narrow tooth	Wide tooth	Segment's dimensions (L x S x H mm)
400	28	24	35 -3.5- 8/15
450	32	26	35 -3.7- 8/15
500	36	30	35 -3.7- 8/15
550	40	32	35 -4.5- 8/15
600	42	36	35 -4.5- 8/15
625	42	36	35 -5- 8/15
650	46	38	35 -5- 8/15
700	50	40	35 -5- 8/15
725	50	40	35 -5- 8/15
750	54	42	35 -5- 8/15
800	57	46	35 -5.5- 8/15
825	57	46	35 -5.5- 8/15
850	58	48	35 -5.5- 8/15

#### Help us to serve you

To take advantage of the productivity of your machines you need the right tool. Having it is easy: communicate to technical staff the necessary parameters and they give you the best solution.

#### We need to know:

Characteristics of the machine - Cutting mode - Material to be processed - Working parameters - Information about the application - Diameter - Bore - Core type (standard – silent - laser)

The dimensions shown are standard, our production department is able to produce the dimensions for every need.

**YOU DON'T HAVE ADAPT TO THE PRODUCTS, BUT WE DEVELOP OUR TOOLS FOR YOUR NEEDS.**
